Customer Reviews

I've always loved making paper airplanes, and this book has plenty to choose from. Directions are mostly easy, though some are challenging. I taught a craft youth session making and flying these, from ages 6-12 and it was a hit. Even taught a little about aeronautics.

Too many of today's paper airplane how-to books are unnecessarily expensive and the planes require elaborate preprinted one-of-a-kind paper. This little gem is affordable, and the planes can be constructed from standard 8 1/2" x 11" sheets of paper. It's a great investment--fun for today and for tomorrow.

"Planes, Jets & Helicopters" is lots of fun and doesn't require anything more than the typical 8.5 x 11 sheet of paper. Gives good instructions on how to build AND how to throw the planes. This book makes a great way to have fun with the kids. Our [...] sons love this book. The planes vary from the simple spinning dart to a few slick jets. We first discovered this book at the library. With all the kid abuse toward the book we finally had to buy our own copy. I was also surprised at how much fun my

inner engineer/crafty-person was having. My only complaint would be that we found a couple of instances in the book where the instructions referred to "point A" and there was no "point A" to be found. But with the figures/pictures it was easy enough to figure out. Overall... a lot of fun for the family and the engineer/child/crafty-person in you.
