Never Fear Cancer Again: How To Prevent And Reverse Cancer (Never Be)

Synopsis

Most cancer research dollars have been wasted by asking the wrong questions, looking in the wrong places, and recycling the same failed approaches while expecting different results. Conventional cancer treatments damage health, cause new cancers, lower the quality of life, and decrease the chances of survival. In fact, most people who die from cancer are not dying from cancer, but from their treatments! That's the bad news. Here's the good news: We can end the cancer epidemic. In *Never Fear Cancer Again*, readers will gain a revolutionary new understanding of health and disease and will come to understand that cancer is a biological process that can be turned on and off, not something that can be surgically removed or destroyed with radiation or toxic chemicals. So whether cancer has already been diagnosed or if prevention is the concern, it is possible to turn off the wayward production of these malfunctioning cells once and for all by reading this book and implementing its strategies. The key to any disease has one simple cause: malfunctioning cells that are created by either deficiency or toxicity. By switching off the malfunctioning cells, you switch off the cancer. *Never Fear Cancer Again* guides readers along six pathways that cause deficiency or toxicity at the cellular level: nutritional path, genetic path, medical path, toxin path, physical path, and the psychological path. By making key lifestyle changes, people truly have the power to take control of cancer and transform their health. This radically different, yet holistic approach restored author Raymond Francis back to health just as it has helped thousands of others, many of whom were told they had no other options or that their cancer was incurable. Take back your health with this book and never fear cancer again.

Book Information

Series: Never Be

Paperback: 384 pages

Publisher: HCI; 1 edition (August 1, 2011)

Language: English

ISBN-10: 075731550X

ISBN-13: 978-0757315503

Product Dimensions: 5.5 x 0.9 x 8.5 inches

Shipping Weight: 11.2 ounces (View shipping rates and policies)

Customer Reviews

The Best I've Read! I just finished reading Never Fear Cancer Again and was about to post my review when I read another review saying that the author was wrong to place importance on pH, and that what you eat has no effect on pH. As one trained in the biological sciences, I feel a duty to throw some light on this so that people are not misled. The author is correct in his assessment of the importance of pH and that pH is influenced by diet. What you eat does matter. For example, studies show that hip fracture incidence among countries correlates very well with the acid load imposed by animal food intake, while alkalizing plant food intake is very protective against hip fracture. The science is very clear in this matter. Contemporary acid-producing diets produce a low-grade systemic metabolic acidosis in otherwise healthy adults. Numerous health problems are now resulting from the mismatch between our genetically determined nutritional requirements and our current acidic diet. Most of us are suffering from the consequences of chronic, diet-induced low-grade systemic metabolic acidosis that is causing growth retardation in children, decreased muscle and bone mass in adults, kidney stone formation, cancer and other problems. Further, many of the problems caused by acidosis have been shown to be reversible by alkalizing the body. Neutralization of the net acid load by supplementing with potassium bicarbonate has been shown to improve calcium, phosphorus, and nitrogen balances, to improve reduced bone resorption rates, and to mitigate the normally occurring age-related decline in growth hormone secretion. Never Fear Cancer Again is the best book on natural cancer healing I've ever read.

There is much in this book that is of value. Francis's attack on the medical treatment of cancer is spot on. His coverage of the general basics of Cancer is also good. However it is in the details that he gets some things wrong. I think this is important? Why? Because some people can become fanatical and do some very extreme dietary measures that can actually result in causing cancer. If this book said to just eat more vegetables and avoid fruit, I would be willing to ignore its unscientific and wrong explanations about acidity and other issues. But most people when they read they should eat more fruit and vegetables will think; well I don't like vegetables that much and it takes a lot of time and effort to clean and cook them so I will just eat more fruit. They may end up eating the equivalent of 6 or more apples a day. Yet their only exercise is maybe at best a 30 minute stroll. Most people are getting too much sugar in their diet and even if its natural sugar from fresh fruit it is fueling the explosion of diabetes, cancer, and other diseases. So unless you are a marathon runner

or a ditch digger eating more fruit is going to be damaging to your body and hasten cancer. Worse still is the effects of fresh fruit on causing a overgrowth of Candida fungus. There is an ever increasing incidence of Candida fungus that both mimics cancer and is found as a co-infection with cancer. It even shows up on x-rays as a dark mass just like cancer. But despite what internet sources say Candida fungus is not caused by a deficiency of baking soda. It's caused by eating more sugar than the body is burning for energy. It doesn't matter if it is white sugar or sugar from natural fresh fruit like an apple.
