Customer Reviews

This is the first book to get before all other boatbuilding texts. Ted and Merilyn have so clearly illustrated, both in words and pictures building a stripper, someone with ten thumbs will produce a thing of beauty.

There are probably six or seven different books and magazine articles that describe the building process in detail, but this is the one that is THE STANDARD and is, by far, the most interesting and complete. It includes plan dimensions for six or eight canoes, but most will spend the \$40 or so to send away for full-size plans and avoid having to loft them yourself. It is also a book that is enjoyable to browse and read even if you are not building. But after doing so, you'll get the bug and spend the next four months in your garage like I did. Very therapeutic

I have built the PROSPECTOR and the REDBIRD. The information in this book is accurate and easy to understand. I researched books before selecting CANOECRAFT and have found it the best source of information and guidance. Several times I have been stopped by people who are

interested in my canoes. When they ask where I got my plans and instructions, I tell them about CANOECRAFT by Moores and Mohr. Thank you Ted and Marilyn.

I have build the Redbird canoe. The book was almost perfect to help me building. Some minor details were left to my own fantasy. It was very hard to understand the special terminology and translate it (I talk and think in dutch). The result is great however. I can advise everybody who is thinking about building a strip canoe to read this book first. All issues , possible problems, step by step plans, measurements etc. are adequately handled in this book.

A great book for any craftsmen. Gives all the info needed. You couldn't make a canoe without it.

This book has great designs and takes you through the process step-by-step. Used it to build my first canoe, and it turned out really well. I highly recommend this book, and if you follow the guidance in this book, your canoe will turn out really nicely.
